Krishna Jaiswal

Full Stack & AI Engineer | CSE GGSIPU '28 | Building Scalable AI-
Powered Apps | Open to Work
Gurugram, Haryana, India

Summary

I'm a Software Developer focused on building scalable, high-performance, and user-centric web applications. Currently pursuing B.Tech in Computer Science & Engineering, I have hands-on experience with React.js, Node.js, and Generative AI, enabling me to develop modern full-stack applications and explore AI-powered solutions. I approach development with a strong emphasis on clean architecture, system design, and performance optimization, ensuring that the products I build are not just functional, but efficient and scalable. What sets me apart is my ability to break down complex problems and turn them into practical, real-world solutions — from intuitive user interfaces to robust backend systems. What I bring: • Strong problem-solving mindset • Solid understanding of system design fundamentals • Experience with modern web and AI technologies & tools • Continuous learning and adaptability I'm actively seeking opportunities where I can: → Contribute to impactful, real-world products → Work on full-stack and AI-driven systems → Grow in fast-paced, high-impact environments Open to internships, freelance work, and collaborations. Let's connect if you're building something exciting — I'd love to contribute. < Krishna />

Experience

Quild

AI Engineer Intern

April 2026 - Present (7 months)

Dwarka

Designed and developed scalable web applications, RESTful APIs, and reusable internal libraries following software engineering best practices.

Built and optimized backend services, workflows, and distributed systems with a focus on scalability, maintainability, and clean architecture.

Ensured application reliability, security, and performance by handling edge cases, reducing latency, optimizing resource utilization, and deploying production-ready applications.

Code Help

Student Intern

April 2025 - Present (1 year 7 months)

Gurugram

As a student at Code Help, I strengthened my problem-solving abilities by practicing Data Structures and Algorithms in C++, focusing on writing optimized and efficient code. Simultaneously, I developed Full-Stack Web Applications using the MERN Stack, gaining experience in front-end development with React, backend development with Node.js and Express, and database management with MongoDB.
